DETAILED ACTION

Claim 10 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 8.

The Examiner asserts the regroup of the five different species.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-9 and 11-58 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Serruys, Handbook of Coronary Stents”.

Serruys discloses all the structural limitations as claimed by Mueller et al. See Chapter 13, pages 122-129.

Claims 1-6, 8, 11-29, 46, 47 and 53 are rejected under 35 U.S.C. 102(e) as being anticipated by Dang US Patent 5,935,162.

Dang discloses a stent having at least 2 tubular portions having a plurality of cell-shaped elements (see front of patent shaded area) and connected by at least one first

connecting means. The elements define an edge contour extending around the stent in a wave-like configuration, wherein the tubular portions extend around the stent substantially in an in-phase relationship.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7, 30-45 and 48-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dang US Patent 5,935,162.

Dang discloses the invention substantially as claimed. However, Dang does not disclose no more than two first connecting means for connecting adjacent tubular portions.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use no more than two first connecting means for connecting adjacent tubular portions for the purpose of reducing the bending stiffness of the stent.
